

GUIDE FIELD GUIDE · V1

Run a Founders Weekend.

Set up the room, then tap. That's the whole job.

EVENT	FOUNDERS	TEAMS	RUNS
Founders Weekend	30 · ages 9–16	Solo to 3	Fri 6pm → Sun 6pm

THE ONLY LOOP YOU HAVE TO LEARN

UNDER A MINUTE, EVERY TIME

If a check-in is taking longer than that, you're reading too much. The Done-when line is the decision — you are not grading, you are confirming you saw it happen.

THE FIVE STAGES · EVERY CHECKED TASK ADDS XP TO THE ROOM'S TOTAL

Sell 1 XP	Build 2 XP	Validate 3 XP	Grow 4 XP	Scale 5 XP
---------------------	----------------------	-------------------------	---------------------	----------------------

BRING

- iPad or laptop, charged
- Your own login (never a shared one)
- The paper kit, as backup

SET UP ONCE

- Cohort + roster loaded
- Board on the projector
- Every guide signed in

NEVER

- No photos or uploads
- No kid logins, no kid email
- No per-child scores on screen

The floor card

Everything you need mid-shift, nothing you don't.

THE PATH TO ANY TASK

Founder → **Stage** → **Criterion** → **Task** → read **Done-when** → tap

Five stages, in order: **Sell · Build · Validate · Grow · Scale**. All 125 tasks are open all weekend — nothing is locked, so you can check any task in any order a kid actually does it.

THE TWO TAPS

✓ Checkmark

– Not yet

Not yet is data, not a shrug. Tap it — don't just say it out loud. It reads as "in the arena, back to work," and it's how we learn which tasks are actually hard.

UNDO – BOTH TAPS

Re-open the task and tap the same control again. It goes back to **Not attempted** — so an undone *Not yet* leaves no mark on the grid at all.

- ☐ Online, any guide in the cohort can undo any tap
- ☐ **Offline, only your own taps** — undoing someone else's won't stick
- ☐ One kid at a time, even after a team tap
- ☐ Once synced, the mistake and the fix both stay in the log

A TEAM OF 2 OR 3

On the task view, **add teammates** (up to 2 more, from the roster), then tap once. One check-in per kid, from a single action. Works for **Not yet** too.

One find-and-tap cycle for the whole team — not three.

NEW FOUNDER WALKS UP

Quick-create: first name, last name, grade band. Three fields, then you land straight in their task tree.

Bands: 3–5 6–8 9–12

Seen a "same kid?" prompt? See page 4.

READING DONE-WHEN LINES AT A LIVE EVENT – THE ONE RULE

The tasks were written for kids working at home, so some lines mention people and things this room doesn't have. Translate them the same way every time:

Where it says "**a parent**" → that's **you, the guide**.

Where it says **photo**, **Founder File**, or **logged** → **you have seen it**. Nothing to upload.

WIFI DIES

Keep tapping. The roster and all 125 tasks work offline. Your taps queue on the iPad and land when the signal returns.

- ☐ Watch the badge: queued → syncing → synced
- ☐ Do **not** sign out while anything is queued
- ☐ **You can't create a new founder offline** — take their name on paper and add them later

THE BELL – TASK 1.2.4

"Ask until one yes." Done when money from a non-family customer is *in hand and the sale is logged* — and "logged," per the rule above, means you've seen it.

The app makes you confirm before the room hears anything. A team's shared sale rings **once** — the counter still climbs by one per founder, so a trio's sale is one bell and +3.

Confirm before you tap. Undo can fix the record — it can't un-ring the bell.

BEFORE FRIDAY

Do this days ahead, not at the door

Six things, and the room runs itself.

Items marked **STAFF** need staff or admin access — guides can't see those controls, which is why one named person owns the setup.

- 1 Create the cohort** **STAFF**

One cohort per city-weekend. Title it the way it should read on the projector — **"Founders Weekend — Boston 2026"** — because that title is what the room sees all weekend.
- 2 Import the roster** **STAFF**

A CSV of first, last, band. A team-name column is fine; v1 ignores it. Bands are 3–5 / 6–8 / 9–12. Re-running the import is safe — it skips anyone already created rather than doubling them. Returning founders from an earlier weekend resolve to their existing account automatically; rows the system isn't sure about land on a **staff exception list**. Clear that list before Friday, or you'll spend the weekend with two of the same kid.

One case the exception list can't catch: **two different children with the same name and the same band get merged silently**. If you know of a name clash on the roster, sort it before you import.
- 3 Mint the board token and test it on the actual projector** **STAFF**

The dashboard opens from a long unguessable link — no login, so any laptop can drive the screen. Open it on the projector machine, full-screen it, then stand at the back of the room and check you can read the grid from there.

It **expires Sunday evening** on its own, plus a short grace. Treat it as semi-public: it names minors — first name and last initial — alongside their progress. Don't paste it into a public chat, and kill it early if it escapes the room.
- 4 Get every guide their own account** **STAFF**

Pre-provision each guide ahead of time; each gets an **invite link** and sets their own password on first open. No shared passwords, ever — every tap is attributed to a person.

If your event has a **join code** for guides who turn up unprovisioned, say it to one person, never to the room. Overheard, it grants check-in power over every kid in the cohort — kill it the moment you suspect it's loose.
- 5 Prep the iPads**

Two settings decide whether the offline safety net works: Safari must **not** be in Private Browsing, and nobody signs out mid-event — signing out clears anything still queued. Charge everything; guides are on their feet for two days.
- 6 Walk the loop once, cold**

Have a guide who has never seen the app check in a fake founder end to end — find, drill, read, tap — and watch the board light up. Then pull the wifi for two minutes and do it again. That's the whole dry run.

THE PAPER KIT RIDES ALONG

Bring the paper forms even on a software weekend. If something breaks mid-event the staff lead calls it, the room goes to paper, and the records get entered afterward. A weekend with a stack of paper is a fine weekend; a weekend where guides quietly stop capturing is not.

FRIDAY

6:00 pm • doors, then ideas

Open the room. Get everyone on the board.

1 Sign in and pick your weekend

Email and password at `/path/fw`, on an iPad or a laptop — both work the same. If you're working more than one cohort this summer, check the cohort name at the top before your first tap. A check-in landing on the wrong weekend is the one mistake that's annoying to unpick.

2 Put the board up before the first kid arrives

Open the board link on the projector laptop and full-screen it. It refreshes itself every few seconds — nobody needs to touch that machine again all weekend. An empty grid at 6pm is the point: the room watches it fill.

3 Add the walk-ins

Anyone not on the roster: **quick-create** with first name, last name, band. It takes seconds and drops you straight into their task tree, so you can create a kid and check their first task in one pass.

If a **"same kid?"** prompt appears, the name already exists:

A MATCH IN A COHORT YOU WORK

You get the full card — name and band. If that's the kid standing in front of you, pick **Same student** and they keep one record across weekends. Different kid, same name? Pick **New student**.

A MATCH ANYWHERE ELSE

You'll only see "this name is already in the system" — no band, no city, no dates. That's on purpose.

Confirm with staff before you create a new record; don't guess your way past it.

4 Say the reading rule out loud to your guides

Once, at the guide huddle, so all of you judge the same way: **"a parent" means us. "Photo," "Founder File," "logged" means we saw it.** Otherwise five guides invent five different standards and the record stops meaning anything.

5 Start checking Friday night

Stage 1 tasks land tonight — a founder who has picked an idea and named a customer has real check-ins to earn. Don't save the app for Saturday. The room should see cells filling in before it goes home.

NOTHING IS LOCKED

A kid can clear a Stage 2 task before a Stage 1 one. The app lets you check any of the 125 tasks in whatever order the weekend actually happens in — no unlocking, no prerequisites, no "you can't do that yet."

BEFORE YOU LEAVE FRIDAY NIGHT — FOUR CHECKS

- Every founder in the room exists in the app, walk-ins included
- Every guide has signed in on their own account at least once
- The board is up, showing tonight's check-ins, and readable from the back
- Every device shows synced — nothing left queued overnight

SATURDAY

The long day • hundreds of taps • the bell

The loop, at volume.

Today the line at your elbow never quite ends. Search by name — it forgives typos — then drill, read the Done-when line, tap, next kid. If two founders share a name and you're not certain which is which, ask before you tap.

✓ Checked — done

✗ Not yet — in the arena

□ Not attempted

refreshes every 3-5s

A TEAM CLEARS SOMETHING TOGETHER

Open the task once, **add the teammates** (up to two more), tap once. Each founder gets their own check-in from that single action — the record stays individual even though your hands did one thing.

To reverse it, undo per founder. There's no "undo the team."

SOMEONE TAPS WRONG

Re-open the task, tap the control again, and it returns to **Not attempted**. Works on **Not yet** too — a mis-tapped Not yet would otherwise sit in the record as a struggle that never happened.

Cohort XP drops back on its own, and both the mistake and the fix stay in the log. Offline is the one limit: you can only undo taps you made yourself.

THE FIRST DOLLAR — TASK 1.2.4

"Ask until one yes," done when money from a non-family customer is in hand and the sale is logged. Real money, from someone outside the family — a neighbour counts. This is the moment the whole event is named for.

Tapping it makes you confirm — *this rings the bell* — then the board celebrates and the counter climbs. A team's shared sale rings **once**, but the counter goes up by one per founder, because each of them made their first dollar.

WHEN THE WIFI GOES

Keep working the line. The roster and every task stay readable, your taps queue on the device, and everything lands when the signal returns — stamped with the time you actually tapped. **Watch the badge**, and **don't sign out** until it says synced.

Two things you can't do offline: create a new founder, and undo another guide's tap. Take new names on paper. And note the board's stale flag tracks the *projector's* connection, not yours — it can look healthy while your iPad sits full of queued taps.

WHY THE BOARD SHOWS NO PER-KID SCORE

The number that climbs is the **room's total** — every task checked adds XP, worth more in later stages. There's no per-child number and no ranking anywhere, on purpose: a founder sees their own cells filling in, never a column telling them they're behind Maya.

SUNDAY

Ship, present, close out by 6:00 pm

Finish the record while the room is still in it.

KEEP TAPPING THROUGH PRESENTATIONS

- Founders clear real tasks while presenting — deliveries, thank-yous, logged sales. Check them live.
- Sweep your founders before the room empties. A task you meant to check on Saturday is gone once they leave.
- Any **Not yet** still standing is fine — it's the signal that tells us where kids need support.

CLOSE-OUT

- Every device must reach synced **before** anyone signs out or hands an iPad back.
- The board link expires Sunday evening — grab any final numbers while it's still live.
- Check-ins are stamped with this weekend, so a returning founder picks up where they left off.

When something goes sideways

WHAT YOU SEE	WHAT TO DO
I tapped and nothing seemed to happen	Check the badge. If it says queued, you're fine — it's saved on the device and will land. If it shows an error, tap again.
The projected board is frozen	Reload the board link on the projector laptop. Note the stale flag only reports the <i>projector's</i> connection — a healthy board doesn't prove the iPads are syncing.
I checked the wrong founder	Undo it on that founder's task, then check the right one. Both actions stay in the log with your name — that's normal and nobody is in trouble.
"Updated by another guide"	Two of you hit the same task at once. Refresh it and look at where it landed — usually you both meant the same thing.
The bell rang for the wrong kid	Undo the 1.2.4 check-in; the counter corrects itself. The bell itself can't be un-rung — celebrate the kid who did earn it and move on.
Two founders with the same name	Use what the search results give you to tell them apart. Still unsure? Ask rather than guess — a check-in on the wrong record is permanent-ish.
A founder isn't on the roster at all	Quick-create them on the spot. This is the one thing that needs a signal — offline, take their name and band on paper.
The app itself is down	Tell the staff lead. They make the call to fall back to paper — one person, one decision, whole room. Paper records get entered into the system afterward.
A parent asks about their child's record	Don't improvise, on accounts or deletion — send it to your staff lead or hello@the120.school. The one line you can safely give: we keep a progress record, and no login or email ever goes to a child.

NOT IN THIS VERSION — SO NOBODY PROMISES IT

- ✗ No photos, video, or file uploads. Your eyes are the verification.
- ✗ No student logins. Founders never touch the app.
- ✗ No email or notifications to kids, ever.
- ✗ No parent view of progress yet.
- ✗ No per-child scores, rankings, or comparisons anywhere.
- ✗ No export of weekend data, by anyone, in v1.

THE ONE THING THAT MATTERS MOST

Keep capturing in the app all weekend — loud room, long line, wobbly wifi and all. The board is only as true as the last tap, and a guide quietly slipping back to a clipboard is the one failure the software can't see.
